

Information Technology Consulting Services Top 10 Services

Fuller Landau's team of IT professionals has been helping companies stay on top of their technological resources for over 20-years. Facing a stream of constantly changing solutions and technologies, executives often look to our IT professionals as an essential component of their strategic growth plan. Realizing that

investing in technology is necessary to stay up to speed with the competition, many companies trust Fuller Landau's IT team to stay abreast on current IT issues and develop solutions customized to meet their needs.

Top 10 IT Services offered by Fuller Landau

Document Management, Messaging and Collaboration:

As companies grow, their business processes change. The team at Fuller Landau team works in close collaboration with a company's management to develop these processes and then find and implement the correct software solutions. Be it internal communication technologies or document sharing, where there is a need, there is a software designed to meet that need. It's just a matter of finding the right tools and implementing them correctly.

 **Software implementations:** Whether it is an ERP / CRM, or something as simple as an internal messaging system, we work closely with software vendors to find the best software for a company. Our team will install and configure purchased software and where required we can also customize software to meet an organizations specific needs.

 **IT Outsourcing:** Many companies are simply not large enough to justify having an IT professional on staff. In other cases, companies may require additional guidance to support IT staff already in place, or are simply looking for temporary resources to complete a special project. Whatever the situation, by working with the professionals at Fuller Landau high-level expertise is always at your fingertips.

 **Network Services Monitoring:** SME's don't always have the internal resources needed to monitor their network, and so react only when something ceases to function. Fuller Landau fills that gap by offering proactive monitoring, so network issues are dealt before they actually become network problems.

 **Network Security Audit:** Information is being transmitted in and out of your organization's network 24 hours a day, 7 days a week. Our IT professionals assess your system through network monitoring, as well as through manual assessments including staff interviews and evaluating physical access to the network.

 **Data Protection Audit:** Running a daily data back-up is just a fraction of what goes into protecting data. In fact, the vast majority of companies have incomplete or unusable data stored on their backup tapes. We will verify that your current data protection infrastructure has been deployed correctly, that all software is properly configured to meet the needs of your organization, and help you evaluate and implement new cloud-based solutions where appropriate.

 **Infrastructure Audit:** When purchasing or selling a company, part of the price tag includes the existing technological infrastructure. Fuller Landau's IT services team can put a dollar value to the existing equipment and, if necessary, give estimates on the cost of replacing old technology.

 **Ensuring technology compliance within an industry:** As dependency on technology in the workplace increases, sets of industry-specific standards have been created. Laws governing data security and transmission differ across countries and even industries. Our IT professionals help organizations ensure that they are complying with any regulations they must abide both internationally and within the area of business they operate in.

 **Accounting Systems:** Outgrown Quickbooks? You aren't alone! Finding the next step in accounting software can be a daunting task, given the plethora of options available. We work with organizations to determine if their accounting software needs to be upgraded, or perhaps it's simply a matter of configuring the current system to better meet a company's changing needs.

 **IT Due Diligence:** Performing IT Due Diligence used to be solely for the large multi-nationals, but in recent times it's become a necessary for organizations of all sizes. Performing due diligence on an organizations IT systems is much like performing an Infrastructure Audit, however, we don't stop at the hardware. We determine if the current processes and software have a growth capacity, whether or not more human IT resources are needed, and what IT risks a company may be susceptible too.

Companies needing “stop-gap” IT support, i.e. Going through a staff transition, or through a merger or acquisition.

Hagen Mehnert, VP/Owner, Eastman Systems

At Eastman Systems, we rely on technological tools to deliver our products on-time and with standards of quality that exceed the expectations of our clients. The preparation of each one of our course packs requires customized project management tools, image editing facilities, data storage and backups - Fuller Landau and their team of experts have not only provided essential IT support for our systems, but they have actively participated in the design and implementation of those systems, training our users and helping us to maximize the potential of our IT investments since 1995.

Peter Makrissopoulos, Controller, ACF Transportaide:

ACF Transportaide provides professional drivers for clients who depend on transport to meet their logistics and provisioning requirements. Managing contracts, logistics, training and the security of HR information is essential to our business, and Fuller Landau has been instrumental in helping us develop and maintain effective systems to meet our goals for over 10 years. We have found the IT professionals at Fuller Landau to be approachable, knowledgeable and reliable every time we've called on them.
